

valtrompia

Discontinuous yarns

colours & yarns for weaving

Semi-dull and bright, regular or with slubs and neps effects, 100% polyester staple yarns.
Mainly produced for curtains, **VALTROMPIA** can also be used for decorations, furnishings and apparel.

Range of available counts: from 5 to 50 Nm;
on request we can supply twisted yarns up to 3 pieces.

STOPFIRE

Fireproof yarns containing a flame retardant polyester fibre with intrinsic flame resistant and self-extinguishing properties.
These properties depend on a component of phosphorous, a flame retarder, which is added during the preparation of the raw material, ensuring flame retardant properties which, unlike those obtained through a surface treatment of the fabrics, are preserved in time and resist both to use (removal by abrasion) and to maintenance (washing, ironing, brushing).

Stopfire yarns allow the production of fabrics and handworks that pass the tests laid down by European regulations.
The product preserves unchanged the characteristics of reliability and workability typical of polyester at all stages of the textile process, also resulting very strong against abrasion, easy to clean and to maintain.
We can supply it both in raw white and package dyed.
Range of available counts: from 5 to 60 Nm.

POLILINEN

Spun yarns in which a bright polyester fibre is mixed, in different percentages, with a linen fibre. We can supply them in raw white or bleached.
The main sectors of use of these yarns are furnishing and curtains.
Range of available counts: from 12 to 36 Ne.

VISCOLINEN

Spun yarns in which a bright viscose fibre is mixed with a linen fibre.
The main sectors of use of these yarns are furnishing and curtains.
Range of available counts: 2/8, 2/9, 2/15, 2/34 Nm.
